Courses Learning Objectives

- Upon completion of “Ethics, Jurisprudence, and Delegation”, participants will be able to:
 - Apply fundamental ethical principles to common situations encountered in dental practice.
 - Identify important legal and regulatory responsibilities, including informed consent, professional liability, and documentation.
 - Describe Michigan's requirements for delegation of duties to allied dental personnel, including permitted functions and levels of supervision.
 - Recognize current legal, ethical, and regulatory developments and their implications for professional practice.
-
- At the conclusion of “Pain Management in the Dental Patient”, the course participants will be able to:
 - Discuss common types of pain experienced by the dental patient
 - Understand how the management of pain affects the quality of life of the dental patient.
 - Develop an awareness of misconceptions and consequences of untreated pain.
 - Discuss Opioid Use Disorder (OUD), misuse of opioids and overdose deaths in the US
 - Describe safe and competent use of opioids for managing acute, moderate & severe dental pain
 - Discuss ADA/ CDC recommendations for managing acute and chronic dental pain
